

### 1.关闭防火墙 和 SELINUX

```
service iptables stop  
setenforce 0
```

### 2.安装samba服务器

```
yum -y install samba samba-common samba-client
```

### 3.配置smb.conf 文件

```
mv /etc/samba/smb.conf /etc/samba/smb.conf.bak
```

```
cat /etc/samba/smb.conf.bak | grep -v "#" | grep -v ";" | grep -v "^$" >
```

```
/etc/samba/smb.conf
```

```
[scripts]
```

```
comment = user public directory
```

```
path=/scripts
```

```
browseable = yes
```

```
writable = yes
```

```
public= yes
```

```
valid users = jhadmin
```

```
create mask = 0644
```

```
force create mode = 0644
```

```
directory mask = 0755
```

```
force directory mode = 0755
```

```
write list=smbgrp
```

### 4.创建samba用户

```
groupadd smbgrp
```

```
useradd -g smbgrp jhadmin
```

```
pdbedit -a -u jhadmin
```

```
smbclient -L //192.168.1.24 -U jhadmin
```

### 5.启动smb服务

```
service smb restart
```

```
chkconfig smb on
```

### 6.wdindos 端连接
